

Hello Everyone -

Here is our first pass at a new set of talk/demo topics for the new year – and a resolution to try harder to stick to them and keep the list up to date, and amended as per members wishes (and as ever, subject to the availability etc. of the presenters).

We will talk through them at our first meeting on the 6th of Jan, and try to finalise the list and the order in which they are done.

Of course for the first day we have to start somewhere, so we've put "System Maintenance" at the top of the list, which is expected to take more than one week – with Defragmentation as the initial subject.

- 1 System maintenance (D&G)
 - Defragmentation
 - Page File
 - Cleaning
 - Protection
 - Drivers
 - Updating
 - Cleaning out old ones
 - Scheduling
- 2 Built-In software (In Windows 7 and as much with XP as feasible) (G)
- 3 Printing & Scanning ** (D&G)
 - Including – Label printing, OCR etc.
- 4 Torrents (T)
- 5 The Control Panel (D&G)
- 6 Operating Systems (T)
 - What they are and do
 - Linux
- 7 Speech Recognition
- 8 Email lists - one easy method (D)

** We've agreed to buy a Club printer to help with this topic, and to provide more facilities to members. More on this at the meeting.
